2. The Female Pelvic Medicine Institute of Virginia, Richmond, VA, USA

Presented at the 38th Annual Meeting of the American Society for Laser Medicine and Surgery, 2018; Dallas, TX

### HIGHLIGHTS

- 20 women (45-77 years) with stress, urge or mixed urinary incontinence.
- The quality of life **improved in all patients** based on King's Health Questionnaire.
- Nearly **75% of patients** significantly decreased urinary leakage or achieved total dryness and maintained these results through 6-month follow-up.
- Patients reached **60% of average improvement** in the King's Health Questionnaire (including health- and social-related domains).
- Majority of patients decreased pad usage to a minimum or totally eliminated them.

Usage of hygienic pads before and after the HIFEM treatments.
